EDUCATION

Purdue University Northwest

Bachelor of Science in Computer Science | GPA: 3.86

Hammond, IN

Aug 2023 - May 2026

Relevant Coursework: Data Structures, Algorithms, Operating Systems, Database Systems, Software Engineering, Network Programming, Computer Architecture, Artificial Intelligence

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, C, SQL, Julia

Frameworks & Libraries: Spring Boot, Spring Security (OAuth2/JWT), Spring Batch, REST APIs, WebSocket/STOMP, Apache Kafka, Hibernate/JPA, React, JUnit, Mockito, Testcontainers, pytest, Playwright

Cloud & Infrastructure: AWS, Docker, Kubernetes, Linux, Nginx, PostgreSQL, Redis, Supabase, MinIO, Liquibase

Tools & Observability: Git, GitHub Actions (CI/CD), OpenAPI/Swagger, Prometheus, Grafana, Sentry, OpenTelemetry, Jaeger, Micrometer, Maven, OpenAI API

TECHNICAL PROJECTS

Issue Tracker: Multi-Tenant Project Management Platform / *Java 21, Spring Boot, PostgreSQL, Redis, Kubernetes*

[GitHub](#)

- Built a production grade, multi-tenant issue tracking platform (Jira style) with role based access control, real time updates, transactional email notifications, file attachments via presigned URLs, and nightly batch analytics, running on Kubernetes with **load tested horizontal pod autoscaling across 2-8 replicas**
- Eliminated cross tenant data leak risk, verified by dedicated cross tenant integration tests, by implementing deny by default WebSocket subscription authorization, tenant binding at the repository layer, and Redis cache keys scoped per organization
- Hardened stateless JWT authentication against token replay and race conditions by implementing atomic refresh token rotation via a Redis Lua script, SHA-256 hashed token blacklisting, and distributed Bucket4j rate limiting
- Achieved **80%+ enforced test coverage across 129 unit and integration tests** (JUnit, Testcontainers) by building a GitHub Actions CI/CD pipeline gated on JaCoCo coverage, with actions pinned to commit SHAs and automated container publishing
- Delivered consistent real-time collaboration across horizontally scaled replicas by fanning out WebSocket/STOMP events through Redis pub/sub, with scheduling coordinated through ShedLock and observability via Prometheus, Grafana, and OpenTelemetry/Jaeger tracing

Schoolem: College Social Platform (Team of 4) / *React, TypeScript, Supabase, Spring Boot*

[Live Site](#)

| Sep 2025 – Present

- Launched a live social platform for verified college students, featuring feeds scoped to each university, posts, and threads, follows, notifications, 1 to 1 discovery, and direct messaging, built with a 4 person team using React/TypeScript, Supabase Postgres with row-level security, and signup verification via university email domains
- Independently designed and built the platform's direct-messaging service as a stateless Spring Boot (Java 21) OAuth2 resource server validating Supabase JWTs, enforcing mutual follow authorization, send rate limits per user, cursor based pagination, read state tracking, and soft deletes
- Delivered real-time message notifications without a dedicated WebSocket layer by publishing Supabase Realtime broadcasts to private channels per user after transaction commit, and verified service correctness with **93 unit and integration tests**

AI Support Platform: Event-Driven Ticket Triage System / *Spring Boot, Kafka, OpenAI API, Docker*

[GitHub](#)

- Automated support ticket classification and triage by building two fully asynchronous Spring Boot microservices connected through Kafka event streaming and integrated with the OpenAI API, verified by **74 automated tests with 80% enforced coverage**
- Deployed a live production system on Railway with managed PostgreSQL and Redis, and Kafka on Aiven secured over SSL, delivering end-to-end user registration, authentication, and ticket processing
- Enabled production monitoring by instrumenting custom Micrometer metrics for ticket throughput, AI processing latency, and model confidence scores, visualized through Grafana dashboards

EXPERIENCE

Amazon

Warehouse Associate

Matteson, IL

Aug 2023 – Present

- Maintained high accuracy and safety standards while processing and sorting high daily package volumes in a fast-paced fulfillment environment
- Balanced **20+ hour work weeks** with a full-time Computer Science course load while maintaining a **3.86 GPA**

ACTIVITIES

Computer Science Club, Purdue University Northwest, Member

Aug 2023 – May 2026
